Investment Objective and Investment Policy

The Investment fund invests in gold and silver, as well as in companies involved in drilling, mining and marketing in the precious metals industry. Foreign currency exposures against Swiss Franc could be hedged.

Characteristics

Due to its balanced structure, the fund offers a combination of stability and growth potential in a world of increasing tensions, economically and politically. It is therefore the suitable investment vehicle for long-term investors.

Investment Manager's Comment

Gold mining stocks rose sharply in September, driven by new highs for the yellow precious metal. The steep rise in mining stocks in recent weeks may seem somewhat frothy. However, this is primarily a catch-up rally, as the stocks had been lagging behind the gold price for a long time. But the sudden strong demand for mining stocks by investors is already being eagerly served by new issues and private placements. A potentially sharp correction is foreseeable. At the stock level, we have sold Aya Gold&Silver. The stock has failed to meet its production targets for several quarters. A report by a short seller blames this on a flawed or even pumped-up resource model. When in doubt, we prefer to sell early rather than too late in such situations, as underground mining remains a risky business. On a different note, we consider the merger of the two small royalty companies Elemental Altus and EMX to form the new Elemental Royalties very positively. This merger combines the two best portfolios and the two stocks with the most attractive valuations among the small royalty companies.
